Oleksandr Matiushenko

AI Engineer | Agentic AI & LLM Engineer | Python

Antalya, Türkiye · Ukraine (open to remote and relocation) | alexhurbet@icloud.com | github.com/HurbetAlex | linkedin.com/in/<handle>

SUMMARY

AI engineer who builds agentic systems and LLM integrations in Python and ships them to production. Most recently Head of AI at GODLIKE, where I also worked as a backend and full-stack developer during the last months. Before that, AI/LLM Developer at WEBXLOO. My personal project Kita (kita-jarvis) is an agent daemon with human approval gates, an audit log, cost budgets and 1,500+ automated tests. I review AI-generated code for defects, test it end to end, and keep agents inside scoped permissions. English C1.

SKILLS

- **Agentic AI:** Claude Agent SDK, Claude Code, MCP servers and clients, tool use, human approval gates, audit logging, cost budgets, multi-agent task decomposition
- **LLM engineering:** RAG, embeddings, prompt engineering, structured outputs, model routing, hallucination detection, output evaluation, intent classification
- **Backend:** Python 3.12, FastAPI, asyncio, REST APIs, SQL, PostgreSQL, pgvector, Qdrant, SQLAlchemy, Redis, Supabase
- **Automation and integrations:** n8n, Telegram bots (aiogram), Jira and Slack automation, Google APIs, webhooks
- **Also used:** Go (Fiber), TypeScript/Node, React, Vue, PHP, BigQuery
- **Engineering practice:** pytest, TDD, code review, debugging, Docker, systemd, Linux, Git, GitHub Actions

EXPERIENCE

Head of AI | GODLIKE

Apr 2026 - Oct 2026 | Remote | Independent contractor (Ukrainian sole proprietorship). From Sep 2026 combined with a backend and full-stack developer role in the development department.

- Built an AI agent for the Company Health Dashboard (Go/Fiber, React, BigQuery) that answers questions on dashboard data through MCP and explains metric changes with role-based access.
- Designed an AI support assistant on n8n with RAG, source grounding, evaluation criteria, guardrails and human handoff, and fixed the retrieval threshold that was discarding correct knowledge-base answers.
- Set up controlled agent workflows: scoped tool access, human approval, audit logging, model routing, rollback points and cost limits.
- Wrote n8n automations for Jira and Slack: sprint readiness checks, Jira hygiene reports, holiday requests and a sprint reporting bot.
- Built proactive alerts that tell support about game-server crashes at startup, with rule-based log classification and Telegram delivery.
- Developed backend features in PHP with automated tests: a billing admin audit log with before/after diffs and rollback, marketing-platform event integrations, and a paid add-on order flow with checkout.
- Fixed responsive layout bugs and a language-sync flow between the marketing site and the customer panel (Vue, Vite, SCSS).
- Wrote the implementation plan for pinning game-server containers to the least loaded NUMA node in a Go service (cpuset), including test strategy.
- Turned business requirements into AI roadmaps and prioritized backlogs across departments.

AI/LLM Developer | WEBXLOO LLC

Mar 2026 - Jul 2026 | Remote | Commercial contract

- Built and supported production AI automation that connects internal tools, email, chat channels, data stores, Python/FastAPI services, vector search and n8n workflows.
- Delivered workflows for document processing, classification, structured data extraction, routing, scheduling and human-in-the-loop decisions.
- Traced multi-workflow failures with logs, controlled test data and end-to-end runs; fixed data-contract and integration bugs and confirmed each fix with repeatable tests.

- Added deterministic checks for routing, data completeness, validation and failure recovery after evaluating model and agent behavior on edge cases.
- Turned feedback from HR, management and engineering into prompt changes, workflow fixes and operating documentation.

AI Automation Engineer / LLM Engineer | Project CLEO (NDA)

Nov 2025 - Dec 2025 | Commercial project

- Designed an AI customer support solution with RAG, vector retrieval, intent classification, validation, escalation and human handoff.
- Connected communication platforms, knowledge sources, REST APIs, Dockerized services, local models and cloud LLMs through n8n and Python.
- Improved answer quality and reliability through prompt iteration, decision logging, latency analysis and testing with the support team.

Software Developer | Freelance and independent projects

2021 - Mar 2026 | Remote

- Delivered Python and full-stack applications, Telegram bots, API integrations, data-processing tools and AI prototypes, from requirements through deployment.

SELECTED PROJECTS

- **kita-jarvis** | github.com/HurbetAlex/kita-jarvis. Personal agentic assistant daemon on Python 3.12, Claude Agent SDK, MCP, asyncio, SQLite and systemd, with a Quickshell/QML desktop companion. Streaming answers, confirmation for risky actions, audit log, cost budgets, 1,500+ automated tests. Review rounds found and closed a data-leak path through web tools.
- **mcp-approval-gate** | github.com/HurbetAlex/mcp-approval-gate. MCP proxy that adds human approval, policy rules and an audit trail to the tools of any MCP server (Python, MCP SDK, Telegram and CLI approvers), 91 tests.
- **fastapi-rag-service** | github.com/HurbetAlex/fastapi-rag-service. RAG API with async FastAPI, PostgreSQL and pgvector, ingestion jobs and retrieval evals (Docker Compose, pytest).
- **n8n-workflow-lint** | github.com/HurbetAlex/n8n-workflow-lint. Static analyzer for n8n workflow JSON, available as CLI, GitHub Action and MCP server (TypeScript), 16 rules and 152 tests.
- **Father-Bot** (private). Telegram advisor for crypto futures with read-only exchange keys, 1,408 tests and an eval set for its critic module.

EDUCATION AND CERTIFICATIONS

- BSc, Information Systems and Technologies, Kharkiv Technological University "STEP", Ukraine, 2022 - 2026
- C1 Advanced English Certificate (2024); Cisco IT Essentials; Cisco CCNA R&S: Introduction to Networks

LANGUAGES

Ukrainian (native), Russian (native), English (C1, certified), Turkish (A2)
